

Compliance statement: 002revB

European Regulation (EC) No 1272/2008 on Classification, Labelling and Packaging of Substances and Mixtures (CLP Regulation)

The new CLP Regulation creates a Classification and Labelling Inventory. The Inventory is populated using classifications determined by the chemicals industry.

Much of the information will be submitted as part of the suppliers' REACH registration for those substances that are placed on the market.

The CLP Regulation ensures that the hazards presented by chemicals are clearly communicated to users and consumers in the European Union through classification and labelling of chemicals.

Before placing chemicals on the market, the chemicals industry have to establish the potential risks to human health and the environment of such substances and mixtures, classifying them in line with the identified hazards. The hazardous chemicals also have to be labelled according to a standardised system so that users and consumers know about their effects before they handle them.

The hazards associated with chemicals are communicated through labels and safety data sheets.

The Regulation replaces over time two previous pieces of legislation, the Dangerous Substances Directive and the Dangerous Preparations Directive. There is a transition period until 2015.

There are no actions required by Glenair to label our products or to provide safety data sheets in accordance with CLP

This statement is periodically reviewed to ensure that it remains as accurate as it can be.
